

circAcc1 (Acetyl-CoA Carboxylase 1)
Cross-species Conservation Summary

.....

Detected in 4 / 6 species

- . Mouse (mmu) – 9 isoforms, strongest expression
- . R.bat (rsi) – 8 isoforms, consistent across 4 reps
- . B.bat (mpi) – 1 isoform, moderate expression
- . L.bat (mfu) – 6 isoforms, low expression
- . Human (hsa) – not detected in milk exosomes
- . Rhesus (mma) – not detected in milk exosomes

.....

Key finding:
circAcc1 is conserved in all
3 bat species + mouse, but
absent from primate milk exosomes.

This may reflect lactation biology
differences rather than genomic
absence of the ACACA gene.
