

A Host-gene anchored strategy

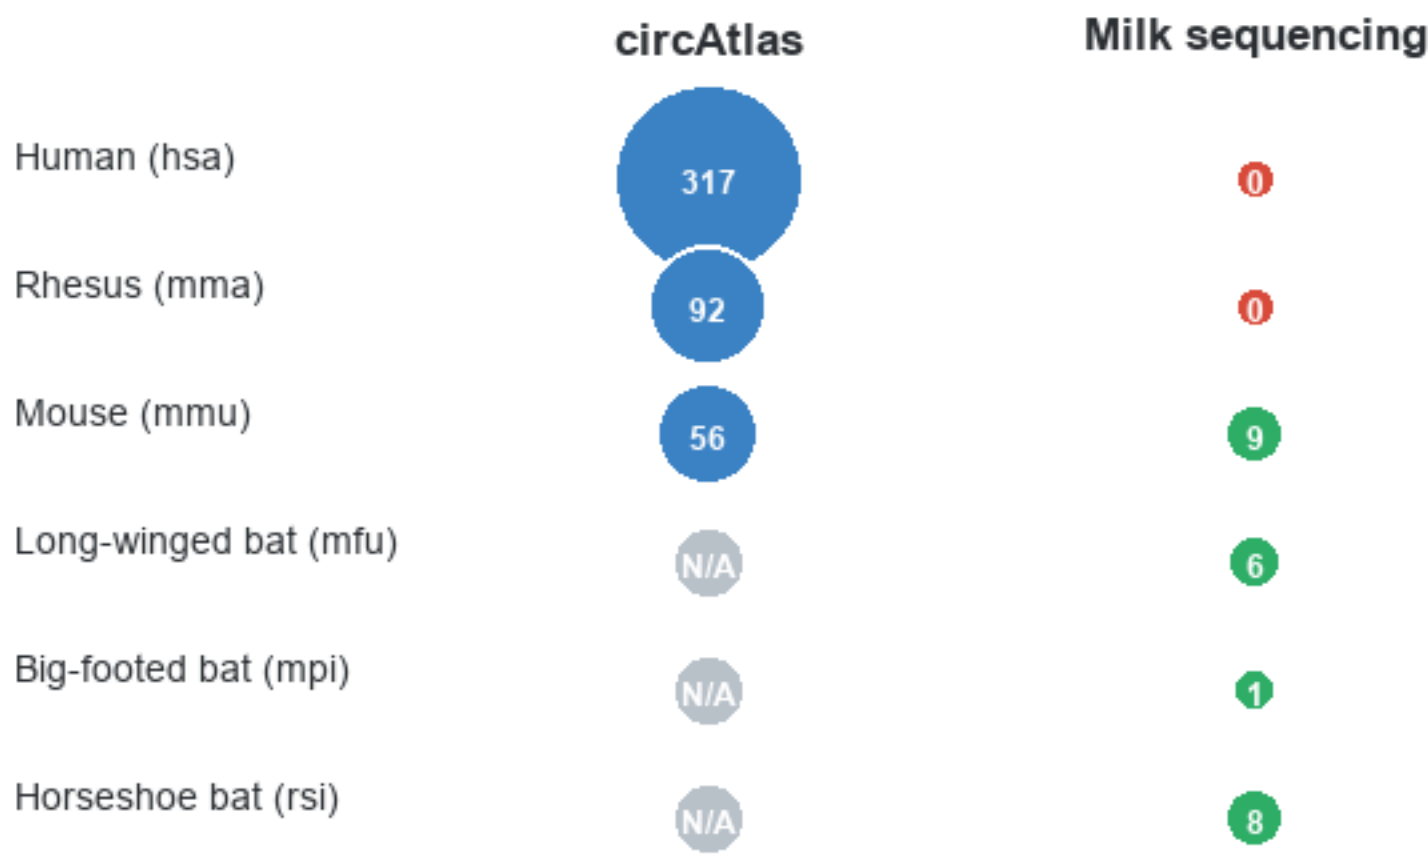

B Cross-species circACACA evidence

	ACACA gene	mRNA evidence	circAtlas ACACA	Milk seq. circACACA	Integrated circ evidence
Human (hsa)	YES	YES	317	0	YES
Rhesus (mma)	YES	YES	92	0	YES
Mouse (mmu)	YES	YES	56	9	YES
Long-winged bat (mfu)	YES	YES	N/A	6	YES
Big-footed bat (mpi)	YES	YES	N/A	1	YES
Horseshoe bat (rsi)	YES	YES	N/A	8	YES

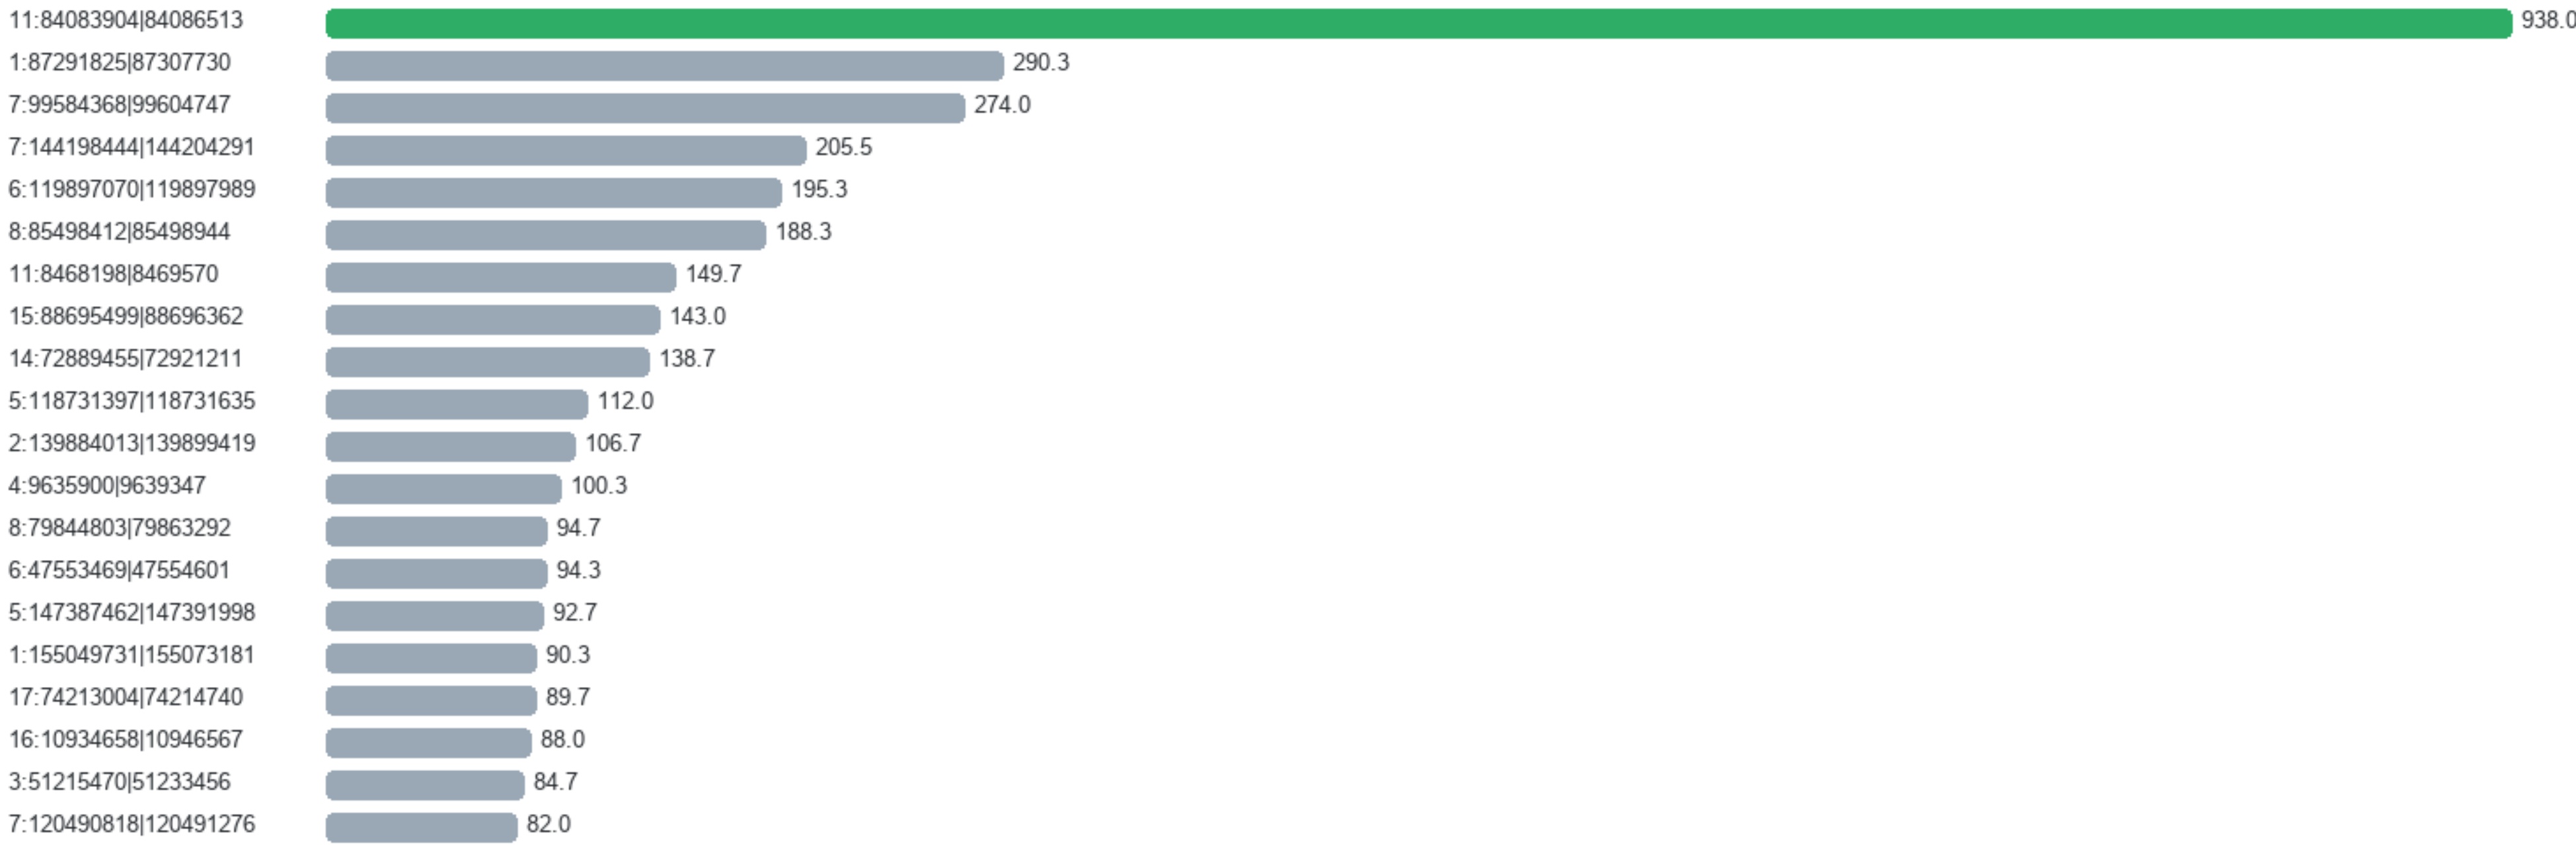

circAtlas supports primate/model species; milk sequencing supports mouse and bat species.

C circACACA counts by evidence source

Bubble area is scaled by ACACA-related circRNA count.

D Mouse milk circAcc1 is a reproducible TOP1 circRNA

CIRCexplorer3 fold gap vs #2: 3.2x

CIRCexplorer3: rank 1, mean 938.0

CIRIquant: rank 1, mean 886.0

find_circ: rank 1, mean 267.3

Conclusion: ACACA anchors multi-species circACACA evidence, and mouse circAcc1 is the strongest milk-sequencing candidate.
